

YOUR FULL REPORT

Do you hate your job?

Mostly a rough patch

Score band: 0–13 points · Career

What this report covers

A practical distinction between a temporary rough patch and a role that still has good bones.

Inside:

1. What is draining you now
2. Changes worth requesting first
3. A 30-day stay-and-test plan

→ Full details for each section on page 2

Your result

Mostly a rough patch (0–13 points)

Your answers suggest the job still has workable pieces. The problem may be a season, project, or boundary—not the whole role.

Name the one change that would make next month noticeably better.

Your practical guide

A practical distinction between a temporary rough patch and a role that still has good bones.

1 What is draining you now

A rough patch has a shape — map it before you judge it. Ask: when did the drain start, and what changed then? A new manager, a reorg, a project that swallowed your calendar, a life event spilling into work? Distinguish the job from the season: if the work itself still fits but the load is temporarily brutal, that is a patch; if you dread the actual tasks on a calm week, that is information too. Write down the three biggest drains in order — be specific ("the 7am standup plus daycare dropoff," not "everything"). Specificity turns a fog of dread into a list, and lists can be worked.

2 Changes worth requesting first

Before any big decision, request the changes that cost nothing to ask for. The highest-leverage asks: one work-from-home day, a shifted schedule, dropping or delegating the task that drains you most, a project that uses your strengths, or a conversation with your manager about workload. Frame asks as business cases, not complaints: "I do my best focused work before noon — could we move my deep work there and batch meetings afternoons?" Managers say yes more often than people expect, partly because replacing you costs them far more than accommodating you. Ask for the two changes that would help most, this week. Their answer is data for everything that follows.

3 A 30-day stay-and-test plan

Run a 30-day stay-and-test plan: long enough for real data, short enough to endure. Week one: implement the changes you requested and fix one drain yourself (boundaries on after-hours messages, a real lunch break). Weeks two and three: track your energy daily, 1-5, with one line about why. Week four: review. If the trend improves, the patch was fixable and you have your playbook. If it is flat or worse despite real changes, that is not failure — it is a clear signal that the issue is fit, not season, and you can start exploring from honesty instead of guilt. Either way, you will know, which is the whole point.
